DETAILED ACTION

Allowable Subject Matter

1. Claims 1-8, 10-19, 21-24 and 26-34 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: Prior art does not disclose or render obvious wherein the time allocator comprises a first circuit to permit a graphics device instruction from a graphics application to direct the graphics-rendering engine to process instructions associated with a second independent image while waiting for an asynchronous event to occur for a first independent image as per independent claim 1; allocation of the concurrent use of the single graphics-rendering engine between the instructions associated with the first and the second instruction stream by using a timing mechanism as per independent claim 19; allocation of time use of the graphics-rendering engine between each independent image; permitting, via a software instruction from a graphics application, the processing of instructions associated with a second image while waiting for an asynchronous event to occur to a first image as per independent claim 23; a first track circuit to track the period of elapsed time that a particular register uses the graphics-rendering engine; and a second circuit to convert the programmable elapsed period of time into an equivalent number of clock cycles as per independent claim 30; a first circuit implementing a software instruction, the software instruction to yield time allotted for instructions associated with a first independent image to use the graphics-rendering engine over to instructions associated with a second independent image as per independent claim 33; instruction transports that comprise an instruction memory area, a first register to define a start and an end to the instruction memory area and a

memory access engine to fetch and deliver the instructions from the instruction memory area to the graphics-rendering engine as per independent claim 34. Flurry reference (U.S. Patent No. 5,455,958) discloses a graphics rendering engine with a time allocator but does not render obvious the processing of instructions associated with a second independent image while waiting for an asynchronous event to occur for a first independent image; the conversion of the programmable elapsed period of time into an equivalent number of clock cycles. Dependent claims 2-8 and 10-18 from independent claim 1; dependent claims 21 and 22 from independent claim 19; dependent claims 24, 26-29 from independent claim 23; dependent claims 31 and 32 from independent claim 30 include similar matter allowable.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
